

1. **What epigenetic markers can be identified by HiFi sequencing?**

Answer: In HiFi sequencing, various epigenetic markers have distinct features. SMRTLink currently offers models for 4mC, 5mC, and 6mA in microbial genomes. For human and other eukaryotic genomes, HiFi sequencing only detects 5mC at CpG sites.

2. **Can HiFi sequencing distinguish between 5hmC and 5mC?**

Answer: No. Currently, HiFi sequencing can only detect 5mC and cannot distinguish 5hmC.
